

EDUCATIONAL MOBILITY OF YOUNG PEOPLE IN EUROPE

AGRICULTURAL, RURAL & FORESTRY COMPANIES

FNEDT FRANCE/KONEYRITÄJÄT FINLAND : PROFESSIONS OF FORESTRY COMPANIES 2018/2019

The FNEDT is committed to facilitating the European mobility of young people in agricultural, rural and forestry work enterprises, in partner training centres, while raising awareness of educational mobility among business leaders. In this context, the FNEDT is initiating a network of European professional organisations and partner training centres aimed at promoting the educational mobility of young people. In Finland, for forestry works, with KONEYRITÄJÄT.

CONTEXT

With the common aim of promoting the integration of young people, supporting the development of quality training pathways, and participating in the renewal and development of the profession and its skills, professional organisations decide to get involved, with their networks, to offer young people learning experiences and role-playing in European contexts. Educational mobility enables the development of personal skills and competences such as maturity, versatility, communication, adaptability and teamwork. These “soft skills” are now expected by employers in the same way as technical skills and professional experience.

GOALS

After inventory and analysis of the target training courses in each country and recruitment of training centres, the aim will be to lay the foundations for a “platform” of work whose objectives will be to set up a network of actors to support the mobility of young people, while promoting the sustainability of the approach to make it an integral part of the training courses and offers identified or at least the usual options.

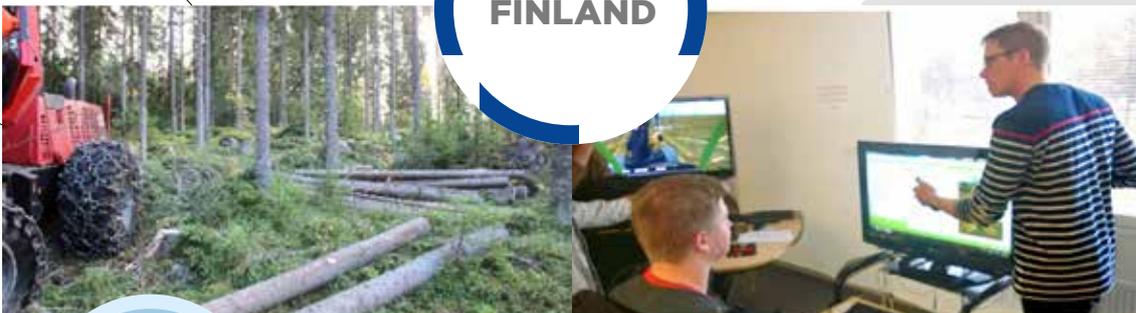

TERMS AND TIMETABLE

The approach could be based (beyond distance exchanges) on annual meetings for the bilateral component and a synthesis meeting for all partners. However, depending on the level of commitment of each other on the different themes or experiments, multi-lateralism will be encouraged...

The summary meeting presenting the operational partners and the first stage of this program is held on February 25 during the kick-off conference organised during the 78th SIMA in Paris-Villepinte.

French national framework for action: FNEDT, professional organisation of agricultural, rural and forestry works contractors, is working alongside FAFSEA in cooperation with the ministries in charge of Education, Higher education and Agriculture to strengthen collaboration between the educational and economic worlds. As such, it develops actions contributing to the quantitative and qualitative development of initial training for young people, in line with the skills and employment needs of the companies it represents. The main axes to respond to their rapid and important development are the information and promotion of the professions for a chosen orientation, the development of the spirit of initiative and the strengthening of the school-company relationship.

SOME POINTS OF REFERENCE

FRENCH AGRICULTURAL, RURAL & FORESTRY COMPANIES

There are 21,671 agricultural, rural and forestry work contractors (ETARF) throughout France, 63% of which are agricultural and rural work, 37% forestry and silvicultural work. They employ 98,000 permanent and seasonal workers.

As key players in works and services in the territories, agricultural, rural and forestry works companies innovate to strengthen the competitiveness of their activities. They provide their customers - farmers, local authorities and public institutions managing networks (e. g. electricity), forest owners, operators, NFBs, etc. - business expertise and analysis of the operating environment, their state-of-the-art equipment fleet, representing significant investments and for the associated qualified and trained staff, motivated by the variety of missions and environments. They are constantly adapting to technological developments and market expectations.

The company manager is a professional. The team is composed of professionals with strong technical skills, validated in the context of agricultural and forestry education (Forestry / Agricultural Machinery Operator, Forest site manager, Agricultural work Manager, Mechanic, Administrative and commercial manager...).

Agricultural work companies

offer their customers, mainly farmers, but also agri-food companies, services. They provide recent equipment with high capacities, specialized skills and consulting support.

Rural work companies

carry out all types of maintenance and development work on rural areas, for communities, networks or individuals.

Forestry work companies

carry out 70% of the silviculture-reforestation work and 80% of the exploitation work for owners, operators, traders, wood industrialists, municipalities, cooperatives, NFB...

FINLAND FORESTRY & RURAL COMPANIES

Koneyrittäjät is the professional organisation representing forest, rural and bioenergy entrepreneurs in Finland. There are about 2,500 forestry contracting companies, 500 in bioenergy production and more than 2,000 rural works in Finland. Koneyrittäjät has about 2,400 member companies, of which about 1,500 are related to the forestry sector. Forestry and rural work companies are mostly small (4 to 8 employees).

Attracting motivated and competent machine operators to work in our companies is a major challenge today and tomorrow.

They provide all kinds of mechanized forestry services: logging, silvicultural services, forest digging (drainage), forest roads construction and maintenance, forest management. Major client groups are forest industry (80%), state forest (9%) and forest owners' management associations (10%), rarely forest owners straight. Total harvested volume of industrial roundwood in Finland in 2018 was 67 million m³. Koneyrittäjät members collected 80-85%. Altogether, contractors in forest-based value chain (from forest to mill gate) employ more than 10,000 people, and their annual turnover is over € 1 billion.

Wood energy contactors (production of forest chips) produce from 7 to 7.5 million m³ per year. They employ about 1700 employees for harvesting, chipping and wood chip transportation. Annual turnover: approximately 160 million euros. Peat production (mainly extraction) is a Finnish speciality. This sector employs several hundred contractors and thousands of workers in the summer. They produce more than 20 million m³ of peat. Annual turnover: about 50 million euros.

Rural construction companies offer a wide variety of services: road construction and maintenance, power lines, fresh water and wastewater pipes, snow removal, mining, agricultural work, etc. Annual turnover: about 100 million euros.
